

ICESTEM 2027 Paper Layout Guide

A preparation sample, not a completed manuscript. Replace all guidance and author fields with your own work. Submit 4-10 A4 pages with 1-inch margins, using Times New Roman. This two-page guide demonstrates the structure rather than the required final length.

Title of the Paper

Author Name(s)

Institutional Affiliation(s)

Corresponding Author Email

Abstract

Replace this paragraph with a 150-250 word summary of the research question, approach, principal findings, and conclusion. Describe what the paper reports without inserting unsupported results. This length applies to the manuscript abstract; contact the coordinators for abstract-only submission instructions.

Keywords: Replace with terms that describe the subject, methods, and application.

1. Introduction

Introduce the research problem and explain its context. Identify the specific objective or question, connect it to relevant literature, and state the contribution made by this paper. Explain the relationship between disciplines where it is relevant to the research.

2. Methodology

Describe the design, materials or data, procedures, and analysis methods needed to understand the work. Explain the basis for methodological choices and report limitations. Include the ethical information applicable to the study rather than copying generic statements.

Manuscript Structure Continued

The text on this page is guidance to replace. Expand the manuscript as needed within the published 4-10 page range.

3. Results and discussion

Report findings in a clear order and distinguish observations from interpretation. Refer to each figure and table in the text, provide useful captions, and explain what the evidence supports. Discuss uncertainty, limitations, and the relationship to earlier work. Do not repeat the same data unnecessarily across text, figures, and tables.

Figure and table guidance

Insert your own figures and tables where they help the reader assess the findings. Check labels, units, legends, and image quality in the final PDF. Do not use colour alone to distinguish essential information. Provide a text explanation of important visual findings.

4. Conclusion

Answer the research question using the evidence presented. State the main contribution and its practical or scholarly implications. Keep future directions proportionate to the findings and identify important limits.

References

Replace this paragraph with complete references in APA, IEEE, or a comparable style used consistently. Ensure that every in-text citation has a corresponding reference and that every reference is relevant. Do not leave sample references or invented identifiers in the manuscript.

Author check

Remove these guidance paragraphs, replace the author fields, check the abstract length and page count, and export to PDF. Confirm that the resulting file is legible and complete. See the Author Instructions for submission contacts and originality requirements.
